

Standard Solutions

Standard Solutions ensure confidence in test results. Choose from Single Parameter Standards, Mixed Parameter Quality Control Standards, or Spec✓ Standards.

Features and Benefits

Assure Confidence in Chemical Analysis Results

Stop questioning the results of laboratory tests. Regular use of standard solutions can ensure laboratory process control, increase analyst confidence, and help provide evidence of performance to inspectors, regulators, and clients.

Three Type of Standards • Single Parameter

Standards—Available in a variety of analytes and concentrations, including Voluette Ampule standards to support standard additions procedures for proof of accuracy.

- **Mixed Parameter Quality Control Standards**—Packaged for specific applications and formulated to match the ranges of Methods, so no dilution is necessary.
- **Spec✓ Standards**—Each set of Spec✓ standards contains four vials filled with gels that simulate the test color at various concentrations. These standards provide a quick and easy way to confirm that instruments are operating properly. Standards are available for several popular methods.

What are Standards?

A standard solution can be used in place of a sample because it contains a known concentration of chemicals or analytes. The analyst can run through a testing process knowing what the final value should be. Standards can be used to establish calibration curves, to determine matrix interferences using standard additions, for control charting, and troubleshooting.

Why use Standards?

When a value is questioned, troubleshooting with standards can quickly pinpoint if, and where, there is a problem. Whether a problem is suspected in the reagents, procedure, instrument, or the analyst, the cause of an inaccurate value can be determined and resolved—saving time and money. Regular use of standards can verify all aspects of a system, and alert an analyst to small problems before the entire process gets out of control.

Customer Need	Intended Use/Feature of Standard	Single Parameter Standards	Mixed Parameter Quality Control Standards
Laboratory Maintenance	Calibration Curves	■	
	Minimum Detection Limits (MDL's)	■	
	Sample Spikes	■	
	Program Verification	■	■
Confidence Building	Technician Confidence	■	■
	Operator to operator variability	■	■
	In House QC	■	■
Time/Money/Space Savings	No dilutions necessary with Methods Multiple analytes in one bottle improves efficiency		■

Technical Support

Hach Company offers technical expertise on www.hach.com and through our technical consulting team. We will help you understand the best use of standards and how to develop a quality assurance program for your laboratory. Visit our website, order the Water Analysis Handbook CD (Lit. #WA02) or call our technical consulting staff with questions.

At , it's about learning from our customers and providing the right answers. It's more than ensuring the quality of water—it's about ensuring the quality of life. When it comes to the things that touch our lives...

Keep it pure.

Make it simple.

Be right.
