

Тестовые наборы для титрования по числу капель

Drop-count titrations are a simple, easy, and cost-effective way to test for many common parameters, including Chlorine, Chloride, Dissolved Oxygen, Carbon dioxide, Sulfite, Nitrogen, Formaldehyde, and more. Kits can be used in the field or lab for a quick reference check. Simply add titrant to the sample until you see colour change - comprehensive instructions are included in every kit.

Тестовые наборы для цифрового титрования

digital titrators use a high-precision dispensation device and replaceable titrant cartridges for highly accurate results in the field or lab. More than 50 different parameters and/or ranges are available to suit many testing applications. Each kit includes comprehensive instructions, apparatus, reagents, and a rugged carrying case.

Quick-change cartridges allows the user to switch parameters in seconds, and each cartridge provides between 40-100 titrations, depending on sample concentration. Common parameters available include Total hardness, Chloride, Sulfide, Carbon dioxide, and Acidity

Тестовые наборы для цветового диска

Colour discs use a visual comparison method (colour matching) to determine concentration. Simply add reagents to the sample, turn the wheel until the sample matches a reference colour - concentration is displayed in a window.

Each colour disc test kit includes apparatus, reagents, and instructions - all in a rugged carrying case. Available parameters include Chlorine, pH, Iron, Silica, Nitrogen and more.

Специальные тестовые наборы

Application-specific kits are available for many parameters, including Arsenic, water in oil, Sulphate, Glycol, and others. These kits use a variety of methods, including test strips, turbidity, and visual colour changes to accomplish testing.

Each kit includes reagents, apparatus, and instructions - all in a rugged carrying case.
